

## Step 1: Docker Application Set up

Download Docker Docker Desktop from this site:

<https://www.docker.com/products/docker-desktop/>

## Step 2: Running Docker

Once Docker Desktop, and double check that the Docker icon shows in your system tray so that you know it is running

## Step 3: Running the Database

Note: At this point, the github repository should be cloned on your system

Navigate to this directory:

`YANKA-AI-Edu-Assistant/database`

Run this command in the terminal to run Docker:

`docker-compose up -d`

When you are done with the database, run this command in the terminal:

`docker-compose down`
